PROFESSIONAL SUMMARY

CSE undergraduate and AI/ML intern experienced in building AI-powered software in Python, including a real-time phishing detection system combining DistilBERT, LightGBM, and an on-device LLM (96.8% accuracy), and an AI agent that automates GitHub publishing through the Model Context Protocol (MCP). Strong foundation in Data Structures and Algorithms, OOP, and Java. Seeking a Software Developer role.

TECHNICAL SKILLS

- **Programming Languages:** Python, Java, SQL, R
- **AI/ML:** Machine Learning, Generative AI, Agentic AI, Natural Language Processing (NLP), Large Language Models (LLMs), AI Agents, Model Context Protocol (MCP), Feature Engineering, Model Evaluation
- **Libraries and Frameworks:** Scikit-learn, LightGBM, Hugging Face Transformers (DistilBERT), TensorFlow, Pandas, NumPy, Matplotlib, Seaborn, BeautifulSoup
- **Databases and Web:** SQL, SQLite, HTML5, CSS3, JavaScript
- **Tools and Platforms:** Git, GitHub, Ollama, Gmail API, PyInstaller, Power BI, Tableau, Microsoft Excel
- **Core Computer Science:** Data Structures and Algorithms, Object-Oriented Programming (OOP), Debugging

INTERNSHIP

AI/ML Intern 2026

Eversoft Technologies

- Gained hands-on experience across Machine Learning, Generative AI, and Agentic AI through enterprise AI engineering work.
- Worked with Large Language Models (LLMs) and AI agent workflows, exploring how agents plan multi-step tasks, use tools, and automate developer processes.
- Applied the end-to-end ML workflow, including data preprocessing, feature engineering, model training, and evaluation.

PROJECTS

PhishGuard AI – Local Phishing Detection System | Python, DistilBERT, LightGBM, Phi-2 (Ollama), SQLite 2026

- Co-developed, in a five-member team, a real-time, fully local phishing detector that scans incoming emails via IMAP/Gmail API before they are opened.
- Built a hybrid ML pipeline combining 37 structural features (headers, URLs, content) with a fine-tuned DistilBERT NLP score, fed into a LightGBM classifier with Safe, Suspicious, and Phishing outputs.
- Achieved 96.8% accuracy, 94.9% F1-score, and 0.980 AUC-ROC on a 10,000-email held-out test set, outperforming standalone DistilBERT (94.3%) and Random Forest (92.4%) baselines.
- Integrated an on-device Phi-2 LLM via Ollama to explain flagged emails in plain language, with ~230 ms classification latency and ~310 MB memory, plus auto-quarantine, a SQLite audit log, and feedback-driven retraining.

GitHub Repo Agent | Python, GitHub MCP Server, Git 2026

- Built an agent that discovers local projects, detects their type, and publishes them to GitHub by creating repositories through the official GitHub MCP server instead of hand-written API calls.
- Developed a security scanner that blocks the push when API keys, tokens, or passwords are detected, preventing secrets from reaching GitHub.
- Automated README and .gitignore generation and the full Git workflow (init, add, commit, remote, push), then verified uploads by reading files back through MCP; repositories are private by default and tokens are never persisted in .git/config.

Customer Churn Prediction | Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn Jan 2025 – Mar 2025

- Built a supervised ML model to predict telecom customer churn using the Telco Customer Churn dataset of 7,000+ customers and 20+ attributes, including tenure, contract type, and charges.
- Trained and compared Logistic Regression (~80% accuracy) and Random Forest (~84% accuracy), after data cleaning, EDA, encoding, and feature scaling.
- Evaluated models with precision, recall, F1-score, and confusion matrix, and used feature importance to identify key churn drivers.

EDUCATION

Lovely Professional University, Punjab, India – *Bachelor of Technology - Computer Science and Engineering* since Aug'22

ViswaSai Junior College, Vinukonda, Guntur – *Intermediate* Apr'21 – Mar'22

Geethanjali High School, Vinukonda, Guntur – *10th Standard* Apr'19 – Mar'20

CERTIFICATIONS

Supervised Machine Learning – Coursera (Oct 2024) | Certification in Cloud Computing – NPTEL (Jun 2024)
